

Colour IT – software development company (Focus: HTML & CSS)

Colour IT is a small software development company that implements IT systems for private companies. Colour IT wants their customers to have web access so that they can see the status and progress of the projects that Colour IT is developing for them. The webpage should look nice and professional so that customers can find the information that they need. The webpage is part of your SEP1 project and the requirements for the website are listed below.

- 1) Make the front page for Colour IT that presents the company to customers in a nice way. It should be an about page with a description of Colour IT, opening times, and contact information.
 - a. The costumer drew a design sketch at a meeting of an idea for layout of the front page and you should try to meet his wishes; however, you are allowed to be creative (the costumer does not always know what he wants). The picture from the meeting is included below.
 - b. The front page should have a navigation bar with links to the different content, and should at least contain links and webpages for the following:
 - i. Information about services that Colout IT provides.
 - ii. Information about the development team (with pictures and email links – the members of the SEP group are development team members in Colour IT, you may include their Scrum roles if you want).
 - iii. A list of all the current projects with a short description (it's OK just to have 1 or 2 projects).
 - Each of the projects in the list should link to a “status” page that contains a table of the requirements for the project (create a dummy table – we will integrate/import the “right” schedule that you create in your SEP1 project when you learn JavaScript). The table should contain the requirements, if it is a functional or non-functional requirement, the deadline, and the status of the requirement.
- 2) Use CSS to organize and style the content.
- 3) “Borrow” pictures from the internet or make/take your own (remember to optimize images for web).
- 4) Maybe you want to dazzle your users by including media (sound, video) on the website.
- 5) No in-line styling allowed (be professional).
- 6) No frameworks allowed.
- 7) No JavaScript allowed (yet) - only HTML and CSS.
- 8) Validate all files and correct errors before handing in.

Hand-in in one packed (only .zip files, **NOT** .rar or .7z) in WISEflow. Only one hand-in per group. Remember all group members name on the hand-in. Your group is the same as for SEP1.
